

You've seen the four shapes. **This is what they cost**, what each one commits you to, and the four answers we need to turn any of them into a real quote. Nothing here moves before the date above.

STANDALONE, FOR REFERENCE

\$25 per user
per month

Octant on its own — everything included, cancel anytime. This is what your client pays without you, and every rate below is a stated relationship to it.

The four shapes, priced

Brand the client sees · who invoices · engineering required.

A Referral

Octant brand · Octant invoices · no build

You receive 25%

of recurring revenue — **\$6.25** per seat / month at list.

No minimum, no notice period, no support obligation. The lightest way to test whether the fit is real.

B Bundled seats

Octant brand · you invoice · no build

\$18 per seat / month

minimum 10 seats, monthly — or **\$15** at 25 seats, annual.

Monthly tier cancels on 30 days' notice. You carry first-line support. The seat minimum is there so this isn't a one-seat discount door.

C Embedded

both brands · you invoice · scoped build

\$12–20k one-time build

then **\$750** / month platform fee + **\$12** per seat / month.

Annual from go-live. The platform fee is the uptime and support obligation an embed creates, priced apart from usage.

D White-label

your brand · you invoice · scoped build

\$36k per year, floor

includes 250 seats, then **\$10** per seat / month — or **20%** of attributable revenue against the same floor.

Annual, floor payable regardless of seats used. The highest number here because it removes our ability to build a name from your clients at all.

ON THE BUILD FEE IN C AND D

It is a range because the range is honest. It covers an authenticated handoff from your identity system and an embed surface built to your case. We scope against your actual stack and quote a fixed figure before you commit to anything — and advisory hours during that build sit inside the fee, never billed twice.

Our time

Priced separately from the software, always, so neither hides inside the other.

Single session, 90 minutes — live, and recorded for you to keep	\$450
Block of six sessions, used within six months	\$2,400 · \$400 each
Monthly retainer	\$3,000 / month
Four live hours a month, async inside two business days, first look at anything you build on top	
Facilitated workshop, full day — your team or your client's	\$3,500 + travel
Advisory during a Shape C or D build	in the build fee

- Retainer runs a **three-month minimum**, monthly thereafter, and **unused hours roll forward one month and no further** — said here so it is not a surprise on an invoice.

Recorded lessons

Turning our hours, spent again for every new person, into a one-time cost plus a durable asset.

We fund it

Videos sit behind the standard wall, included with every seat under any shape at no extra cost to you. **Timeline is ours to set and is not currently committed.**

You fund it — \$8–15k

Depending on length and how bespoke it is. In exchange: **category exclusivity for twelve months** — no other partner in your vertical — and your framing baked into the material rather than bolted on after.

What we need to quote you

Four answers turn everything here into one number with your name on it.

- 1 Which shape** — A, B, C or D. If none cuts in the right place for what you are building, say so; a fifth shape is available.
- 2 Roughly how many people** would hold a seat in year one, and whether that is your staff, your clients, or both.
- 3 Who your client thinks they are buying from** at renewal — the one answer that separates A from B, C and D.
- 4 When you would want to launch.** A and B need nothing built; C and D need a scoping conversation before a date means anything.

Before you reply

Seat counts are trued up quarterly under B, C and D, and invoicing runs in advance by tier — you are never billed for a seat before it exists. The engine, course, lexicon and assistant are included under every shape; there are no feature gates at any tier.

One term that is not negotiable at any price. Octant is not a validated psychometric instrument and does not claim to be. It must not be used as a hiring, selection, promotion or termination instrument, and any integration will say so where users can see it. We would rather lose the deal than bend this one.

Reply with those four answers — or just the first two — and a fixed quote and draft agreement come back. For Shape C or D, a scoping call first. nick@stratfieldpartners.com
